

# Module 5 Demo Practical Assignment

## Introduction

This assignment goal is to learn how we can modify existing applications code to employ it in our new application idea. It also will help you to learn how to understand other programmers code. So, if you will join any programming team to continue working on their project, you will find yourself familiar with such task

## Assignment:

For the hands-on project for egg cooking timer which provided by Google Codelab. You need to apply the following changes:

- Change the program to be pizza cooking timer. For this task, you need to change the images that are related to egg and replace them by pizza.
- Change the notification message to be suitable for our application.
- Change the cooking list options to:
  - Heat pizza
  - Cook small pizza
  - Cook medium pizza
  - Cook Large pizza
  - Cook
- Set the timer for each of the about options to: 1 , 2, 4, 5, and 10 minutes

## Submission Requirements:

- Create a Demo video of your project. Explain the details of what you did exactly. Run your code and show the results of your run.

## Bonus (2 point) Optional:

- Add to your project the code to print in the app the message “Your pizza is ready” when the timer is ending the counting down.

## Due Date:

02/21/2020

**Note:** 10% penalty will be applied for late assignment submission
